

Digital Design Using FPGA

Final Project – Group Formation and Proposal Requirements

Dears,

For the final project of this course, you are required to work in groups of up to five students. Each group must submit a short proposal before starting the implementation. The purpose of the proposal is to make sure your project is well scoped and feasible within the time we have left, and to give you early feedback before you commit time to the design.

What the proposal should include

1. **Motivation** – why your group chose this particular project, and what makes it interesting or relevant to you.
2. **Approach** – how you plan to design and implement it: the overall architecture, the main modules you expect to need, and the tools or verification strategy you intend to use.

The proposal does not need to be long. A clear one-page description that covers both points is sufficient at this stage.

Deadlines

Milestone	Date
Group formation and proposal submission	Sunday, July 19 (tomorrow)
Proposal discussion and acceptance confirmation	Sunday, July 19
Final project submission	Thursday, July 23

Proposals will be reviewed and discussed on Sunday, and each group will be told whether their idea is accepted as is or needs to be adjusted before moving forward. Please treat the Sunday deadline as firm, since the discussion and confirmation step needs to happen the same day to leave enough time before the final submission on Thursday.

Best regards,
